

# HD voice, closer than ever!

The new audio technology eliminates background noise.

---

Have you ever used your mobile phone while on the move and struggled to hear the person on the other end? HD voice (high-definition voice) distinctly improves speech quality and is free of charge. When you make a call from a noisy location (train, street, restaurant), background noise is eliminated. In contrast to traditional telephony, HD voice transmits a wider range of voice frequency.

## Benefits

- > You can make calls in noisy environments and understand the speaker perfectly.
- > Quiet or whisper sounds are transmitted clearly and audibly.
- > You can speak quietly without anyone overhearing you.

## Requirements

- > Both participants in the call are Swisscom customers (NATEL® subscription) and use the Swisscom 3G network throughout the entire duration of the call.
- > Both participants have a NATEL® that supports HD voice. You can find a selection of HD-voice-capable phones in the Swisscom online shop, [www.swisscom.ch/extranet](http://www.swisscom.ch/extranet) for registered Corporate Business customers or at [www.swisscom.ch/shop](http://www.swisscom.ch/shop). Both phones are marked with the HD voice symbol.
- > If the requirements for a HD voice call are met, the call is automatically carried out in HD voice.

## Your next step

Contact your personal customer advisor, who will be happy to help.
