

Internet-Box 3 fibre optics kit

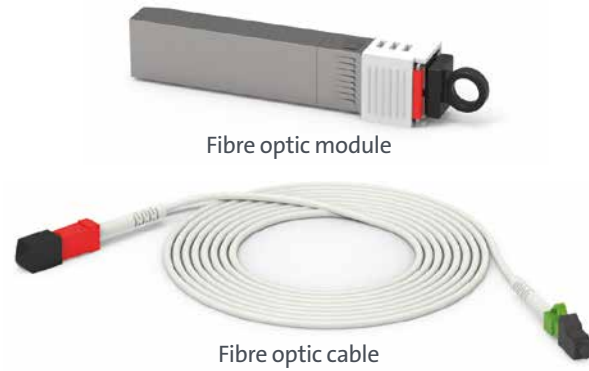

Switch to 10 Gbit/s fibre optics technology

(Deutsch auf der Rückseite)

Start

The package includes:

Fibre optic cables are delicate. Do not bend or touch the unprotected ends.

1

The fibre optics kit will only work with this Internet-Box.

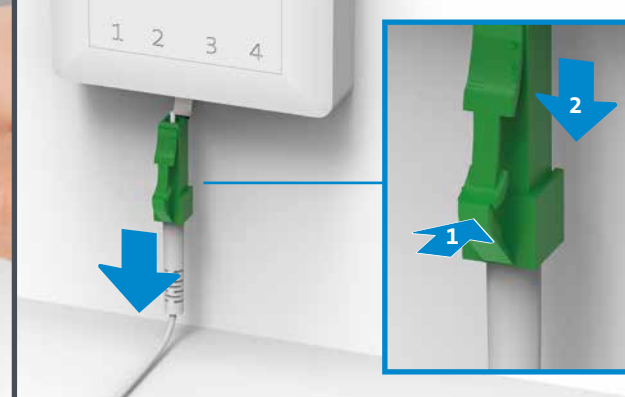

2

Switch off the Internet-Box.

3a

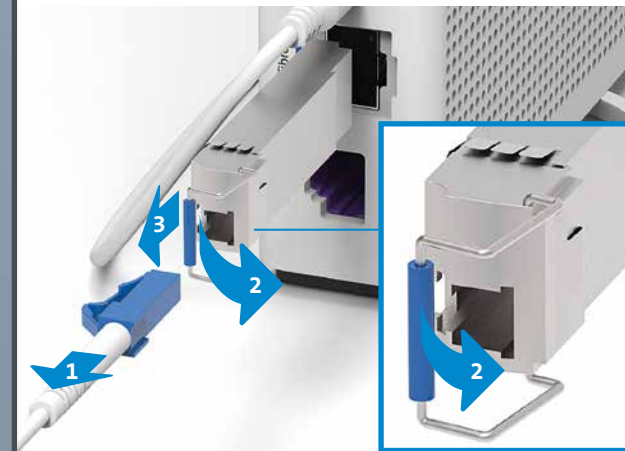

Remove the fibre optic or DSL cable from the socket.

Remember the slot number. Press the lever against the plug (1). The cable can then be pulled out easily (2).

3b

Now remove the fibre optic cable and module from the Internet-Box ...

... or the DSL cable.

9

You are surfing with the latest fibre-optic technology!

Switch on the Internet-Box and wait 5 minutes, until the LED on the front goes white.

8

Connect the other end of the fibre optic cable to the fibre-optic socket.

7

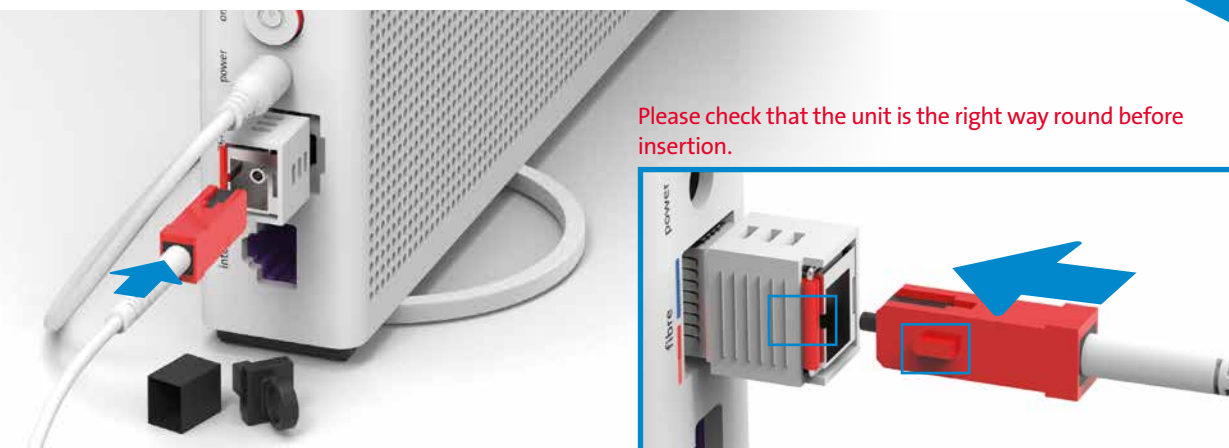

Use the same slot as for the previous cable (see step 3a).

Installation overview

Connect the (new) fibre optic cable to the Internet-Box.

6

Remove the protection caps and connect the red end of the cable into the Internet-Box. The cable is sensitive, so please do not touch it at either end!

5

Insert the (new) fibre optic module.

Push in the fibre optic module into the «fibre» insert until it clicks in. The red markings on the fibre optics module (bracket) and Internet-Box belong on the same side.
