

Internet-Box fibre optics kit

Switch to 1 Gbit/s fibre optics technology

(Deutsch auf der Rückseite)

➔ The package includes:

Fibre optic cables are delicate. Do not bend or touch the unprotected ends.

Your Internet is now set up.

1 You have one of these Internet-Boxes.

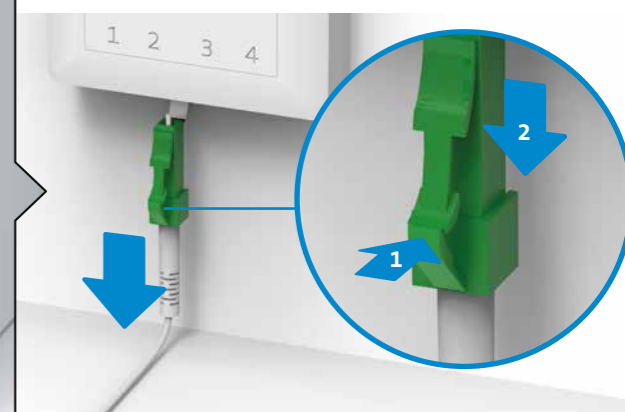

Installation is identical for all Internet-Boxes.

2 Switch off the Internet-Box.

3 Remove the fibre optic or DSL cable from the socket.

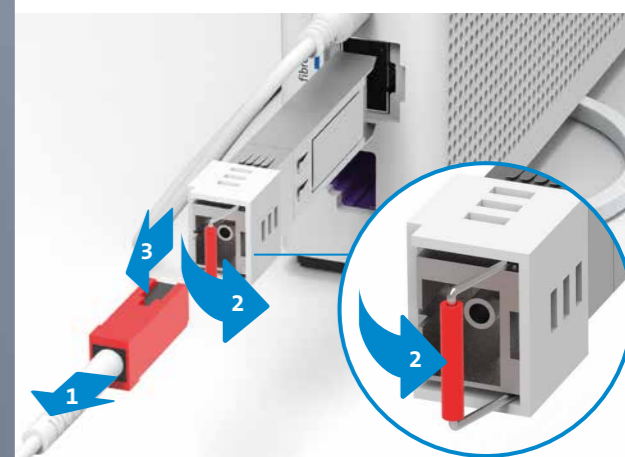

Remember the slot number. Press the lever against the plug **1**. The cable can then be pulled out easily **2**.

Installation overview

4 Now remove the fibre optic cable and module from the Internet-Box ...

... or the DSL cable.

8 Switch on the Internet-Box and wait 5 minutes, until the LED on the front goes white.

7 Connect the other end of the fibre optic cable to the fibre-optic socket.

Use the same slot as for the previous cable (see step 3).

6 Connect the (new) fibre optic cable to the Internet-Box.

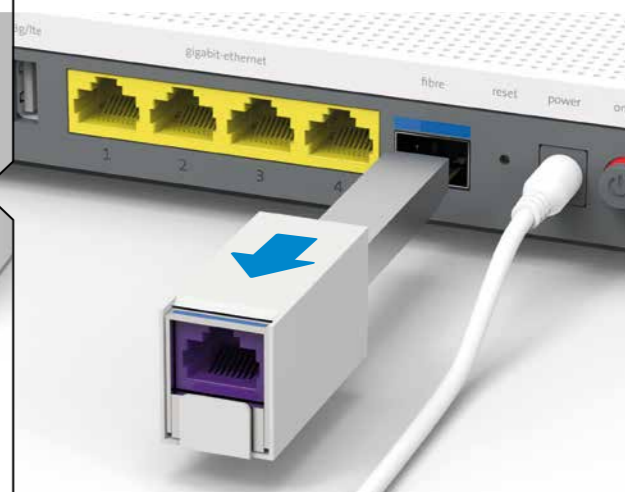

Remove the protection caps and connect the blue end of the cable into the Internet-Box.

5 Insert the blue fibre optic module.

Push in the fibre optic module into the «fibre» insert until it clicks in. The blue markings on the fibre optics module (bracket) and Internet-Box belong on the same side.

If you have a G.fast module, please remove it as well.
