

Double win for the Swisscom network: number 1 for speed and coverage

The latest results from Ookla delivers a clear result again for Switzerland: Swisscom has the fastest mobile network in Switzerland and the best coverage. Almost half a million customer-initiated tests were taken between January and June 2019 to determine the fastest mobile network.

Customers in Switzerland have carried out several hundred thousand tests via the Speedtest by Ookla app. The results highlight which mobile network achieves the best results under real conditions. Swisscom has come out on top once again with a noticeable lead over its competitors and improvements on the previous half-year.

- Swisscom provides the fastest mobile Internet: the average download speed is 53.88 and the average upload speed is 16.95.
- Swisscom provides the best coverage: There were a total of 164,553 locations observed on Swisscom Network. Of the locations where Swisscom subscribers were active, 164,418 had General Availability and 158,526 had 4G Availability.

“Ookla Speedtests are actively carried out by customers under real conditions. The measurements are taken in supermarkets, underpasses or at home. We are therefore delighted that our mobile network has been confirmed as the best under a wide range of circumstances,” says Christoph Aeschlimann, CIO&CTO Swisscom. “Ultimately, however, the interaction of all the networks is also crucial. In this regard we combine the best mobile network with our high-performance, ultra-fast broadband network, which will cover all of the more than 2,100 Swiss municipalities by the end of 2021.”
