# Access to router portal

## 1.1 Need

You would like to update or check the settings of your Centro Business router.

## 1.2 Description

You can change the settings for your customer network (LAN) via the router's user portal. In order to access your router, connect your PC to the router and log into the router with the correct login data.

## 1.3 Requirements/restrictions

### Requirements:

- Swisscom subscription
- CB firmware version: 07.02.06 or higher
- PC with Internet browser connected locally to the router (via Ethernet cable or WLAN)
- Username and password for router administration are known

### Restrictions:

- Configuration: "Fixed IP on all LAN ports" is not activated

## 1.4 Diagram

## 1.5 Access router portal locally

Open your Internet browser, enter the router's "LAN IP address" in the browser address field and press the Enter key. The standard "LAN IP address" for the router is **http://192.168.1.1**. You can find an alternative router IP address in your documentation.

Enter the login data in the login box and click on "Login".

The username is always "admin", and you can find the password in your documentation (default: 1234).

NB: Depending on your "Privacy Option" settings, you may also be able to view the router password in your Customer Centre if you have a "My SME Office" or "RES-DSL" subscription.

Router Login

Router user name

Router password

Login

### Check if successful:

If the Centro Business router overview page appears, the login process was successful and you can enter the required settings. If an error message appears, check your password and, if necessary, your username.
