# Extend Swisscom TV / DSL
## Optical connection kit set-up

**swisscom**

Installation

Warning:
Do not bend and kink the optical cable!
Loop diameter should never be smaller
than 2 cm.

1

If necessary, secure the media converter to
the DSL modem and Swisscom TV-Box or
computer using double sided adhesive
tape.

4

When laying cable through walls use
protective cable bushings. Diameter of
hole 7 mm.

5

Note: Check length of cable. Cut to correct
length using lower opening on the cutter.

8

First end of cable: Pull out clip, push in
cable as far as possible, push clip closed,
(steps ⓐ to ⓒ).

9

Second end of cable: Connect flashing
end to flashing connection.

## 2

Lay the cable: Secure along walls using cable clips.

3

When laying the cable around corners, use the corner template. Refer to steps **a** to **c** . Remove template.

6

Jede Öffnung nur einmal benutzen
Please use each hole once

technetix

Cut both ends of cable for optimum connection. Use the upper opening on the cutter to do this.

7

Connect both media converters to the power supply using the mains adapter.

10

Connect both media converters with Ethernet cables to DSL modem and Swisscom TV-Box or computer.

Check connections: LEDs on the Ethernet connectors must flash orange and green. In the event of any disruption, see reverse side.
