About us

Swissprime Technologies AG is a tech start-up, located on the shores of Lake Zurich, which specializes in the development and marketing of innovative wireless locking solutions.

The Company's dedicated team of young engineers and business experts combines the necessary skill sets to come up with new sophisticated products delivering real customer value.

What we do

Swissprime Technologies' mission is to create an innovative electronic locking platform and to subsequently launch it in the most attractive verticals (e.g. door locks, furniture locks, post box etc.)

Our Products/Services on LPN

My Lock is an electronic locking solution for innumerable applications, which allows its users to share and revoke lock keys over the air by simply making use of their smartphones. The lock is getting online by means of the smartphone and hence capable to transmit all locking activities to the cloud application.

Most features of the locking solution are based on smartphone capabilities, thereby leading to lower product costs. Additionally, communication with the lock is established through modern wireless technologies (either NFC or BLE).

In order to transmit events from the lock to the cloud (and its users) or for remote access (e.g. open/close the lock), the solution will be extended with a Low-Power Wide-Area network (LPWAN). Our first prototype makes use of LoRa technology and Swisscom' LPN infrastructure.
