

Environmental policy at Swisscom

What we do.

- > We are committed to a sustainable development of our society.
- > We minimise environmental risks and comply with legal requirements.
- > We use natural resources sparingly and reduce the impact on our environment. We support a circular economy and manage our waste accordingly.
- > We are internationally committed to climate protection. We have a clear position on this issue.
- > We are continuously improving our environmental management system to increase the company's environmental performance and make targeted use of environmental improvement potential in our operations.
- > We actively support suppliers and contractual partners in the promotion of environmentally-friendly products. We expect from our suppliers a similar commitment to environmental and climate protection.
- > We are involved in the development, implementation and marketing of environmentally-friendly services.
- > We ensure that our employees have information and training about sustainability and the environment and motivate them to adopt an environmentally-friendly attitude.
- > We publish our sustainability and environmental activities and results and thus promote credibility and customer confidence.
- > This policy is valid for the entire Swisscom Group, its operations, offices, distribution and logistics.

Worblaufen, May 22nd 2019
