Service Assurance Usage of Proved Equipment List

During network analyses, we noticed an impressive number of incorrectly configured terminals.

This might lead to service impacts or even total signal loss if the CPE is not configured correctly.

The correct CPE configuration can be found in the document [E BBCS Supporting-Document Proved-Equipment](#) on our CWS website.

We kindly ask you to install within your customer base only proper CPE/Frimware/Datapump combinations and to verify them frequently.

WSG

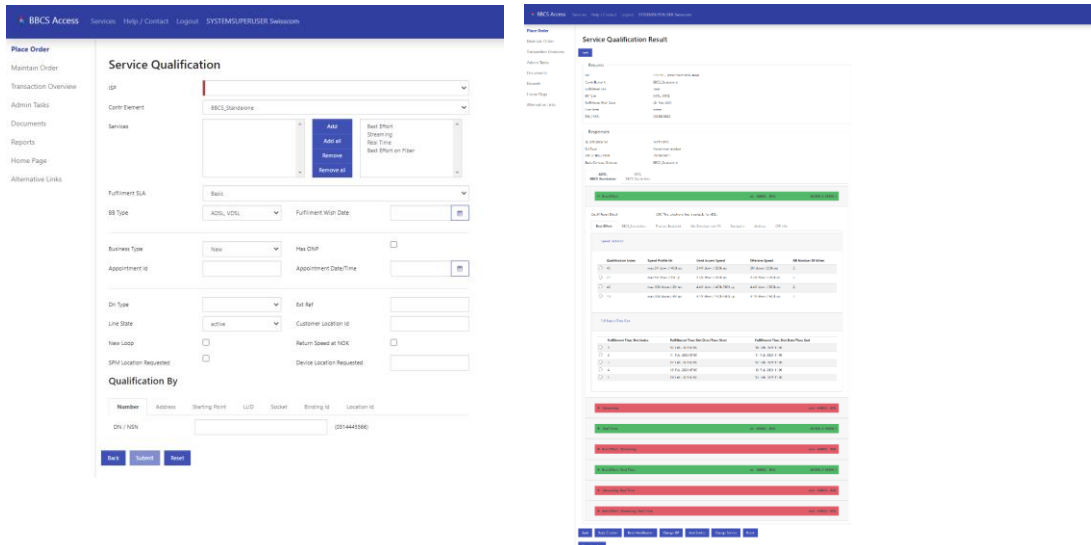

Change of Look of User Interface

As already informed in previous releases we are in the process of redesigning the WSG User Interface.

The following masks have been revised with this release:

- Quali Request und Response
- Maintain Order
- Transaction Overview
- Order Summary

Using the alternative links, the known Pearl masks are available until further notice.
