WSG GUI Facelift
Change in the presentation

Redesign of Order Service and IP Pool Settings

Implementation of todays Pearl GUI into Java based GUI came along with an adapted GUI design and was implemented in 2021.

In the meantime, it has become apparent that certain information is either unnecessary or inconveniently placed.

This has prompted us to examine all Angular masks for the above-mentioned points and to suggest improvements.

The improvements will be made step by step over the next few months.

With mr2205, the revised Order Service and IP Pool Settings view for BBCS (copper and fiber) will now be launched.

An example of the new view can be found on the next slide.
