1 Introduction

This manual describes the Graphical User Interface (GUI) of the WSG Application.

For user-friendly reasons, the manual is written as short as possible. This means every function is illustrated with a screenshot example and a small text.

The common rules like validation, error messages and Button are described in Chapter 2

The Application is WEB based and for full functionality the following Web-Browsers are supported

- Microsoft Internet Explorer Version 8 and higher
- Mozilla Firefox Version 3.0 and higher

The application is built in the following main parts

- Place Order
- Maintain Order
- Voice Messages
- Installation Ticket
- Transaction Overview
- Admin Tasks
- Reports
- Documents

The application supports four languages (English, French, Italian, German), but is delivered in English only.

2 Validation and Navigation

The following validation rules and navigation types are implemented in the application.

2.1 List of Values (LOV)

Some fields of the input screens are validated against a list-of-values. The user can press the little arrow beside the fields and select one of the values. See example:

The screenshot shows a form with the following fields:

- Plan Date:** A date field with three input boxes containing '17', '09', and '2001', followed by the text '(dd mm yyyy)'.
- Kind of Creation:** A dropdown menu currently showing 'New'. A list of values is displayed below it, including 'New', 'Relocation', and 'Promotion'.
- Navigation:** A 'back' button on the left and a 'reset' button on the right.

Some other fields are multiple choices and the user can select several values with the Ctrl-Button. See example:

The screenshot shows a form with the following fields:

- Order Nr:** A text input field.
- from:** A text input field.
- Order Type:** A multiple choice field showing 'BBCS_MODIFY' and 'BBCS_DISCONNECT'.
- Order State:** A multiple choice field showing 'ENTERED'.

2.2 Visual support for required columns

As of WSG 8.6.0 a visual support for required columns has been introduced.

In the context of the actual screen:

- a '*' will be added to column label for all required columns.

- "green" Labels indicates indexed columns

2.3 Date and Date/Time Fields

As of WSG6.0 a new, more flexible way of date and date/time selection has been introduced. In contrast to earlier versions of WSG the date and date/time fields have been merged to a single field accepting absolute and relative time definitions as well as null values.

A date or date/time field recognizes any “DD.MM.YYYY” formatted string as an absolute date definition. Additionally the date/time field accepts any “DD.MM.YYYY HH:MI” formatted string as an absolute date/time definition.

A date or date/time field recognizes any string containing the keyword “TODAY” optionally followed by a “-/+ OFFSET” as a relative date definition, where OFFSET is an integer number of days from today.

Example:

- “TODAY-1” → yesterday
- “TODAY+1” → tomorrow
- “Today -7” → a week ago

The following screenshot shows a sample date and date/time range definition:

Plan Date	from	today -2		to	29.06.2005			ascending	▼
Transaction Date/Time	from	29.06.2005 00:00		to	29.06.2005 09:33		1	ascending	▼

Please note that relative and absolute date or date/time definitions may be mixed.

The date and date/time fields offer a convenient way to define absolute dates or date/times: Clicking the date icon  next to the field opens the date picker widget:

June, 2005							
Today							
Mon	Tue	Wed	Thu	Fri	Sat	Sun	
22	30	31	1	2	3	4	5
23	6	7	8	9	10	11	12
24	13	14	15	16	17	18	19
25	20	21	22	23	24	25	26
26	27	28	29	30	1	2	3
27	4	5	6	7	8	9	10

Select date

Clicking the time icon  next to the field opens the date/time picker widget:

June, 2005							
Today							
wk	Mon	Tue	Wed	Thu	Fri	Sat	Sun
22	30	31	1	2	3	4	5
23	6	7	8	9	10	11	12
24	13	14	15	16	17	18	19
25	20	21	22	23	24	25	26
26	27	28	29	30	1	2	3
27	4	5	6	7	8	9	10

Time: 09 : 30

Select date

2.4 Sort Order

As of WSG Version 5.0 if the sort order of any field in the 'Read Orders' or 'Read Voice Messages' screens is amended, then this change stays in force for the life of the browser session!

2	descending
	ascending

2.5 Error handling

After submitting the input screen, the application validates the users input. If a business rule, format etc. is violated error message screen will be displayed. The texts are self-explaining and the user has to correct it.

Service Creation

Invalid Input

Message	ISP_ID is missing
Field	ISP

2.6 Operation succeeded

After submitting the input screen in an admin task, the application processes the users input. If everything is correct the 'Operation succeeded' screen will be displayed.

2.7 Service Navigation

For each action, whether the user is a Super User, read-only or CUC, the currently valid services are displayed in the Service Navigation menu at the left site of the screen.

Note: the WSG interface is frames based. Above is a header frame that replaces the PowerGate header, below and to the left is the navigation frame and to its right the function frame. The frames implementation has some advantages, such as the navigation options always being available, but also has some odd side effects such as when the browsers refresh button is pressed when the user is returned to the Home Page!

In order to save space in this document all subsequent function screen shots in this document have been reproduced without the Powergate frame!

The Powergate header offers the following functionality (Top Frame):

- Services Back to the selection of services in Powergate
- Contacts Contact information for questions concerning the WSG BBCS service
- Help FAQ (frequently asked question) for the WSG BBCS service
- Logout Logout from Powergate

As Read only user:

Services Contact Help Logout RO User ISP

WSG BBCS Orders

NOTE: That the following screen shots and associated descriptions are for the Super User only! If certain functionality is not displayed then it is not available to other users.

As Superuser:

[Services](#) [Contact](#) [Help](#) [Logout](#) [SU ISP](#)

WSG BBCS Orders

Place Order	WSG Welcome to the Swisscom Entry Page for Broadband
Maintain Order	
Voice Messages	
Installation Ticket	
Change Ticket	
Transaction Overview	
Admin Tasks	
Documents	
Reports	
Home Page	

2.8 Page flow

The page flow for the main function areas is shown in the following figure. It will always be possible to navigate directly from one main function to another via the menu on the LHS of the screen. Within each function the user may go back to the previous screen using the 'Back' button.

2.9 Buttons

For each user screen the available action buttons are displayed at the bottom of the screen.

The following buttons are used in the application:

	Go back to the previous screen
	Reset all of the fields to their original values
	Go forward to the appropriate create screen
	Submit input data for processing
	Invoke the functionality to cancel an order
	Refresh a Detail screen to display the latest status
	Go forward to the appropriate modify order screen
	Download the selected document
	View APV responses relating to the pending Order
	Continue to the next screen in the sequence

There are two different button states: active and inactive.

	Active
	Inactive

3 Login

The whole login part is described in the Users Manual of PowerGate.

4 Principals

After login via Powergate you can see the following menus on the left side

As a basic rule, an ISP can only have access to orders and installed services belonging to him. This restriction is automatically secured by the login procedure over Powergate (using ISP Code as key).

- Place Orders > Used for explicit *Service Qualification*, entry of *new orders* and *Get Service Status*
- Maintain Order > Used for maintaining Orders in any status (*read, list* and *cancel order*)
- Voice Message > Used for displaying of BBCS Service Status changes caused by Voice orders which belongs to the ISP defined by login (e.g. voice cancelling).
- Installation Ticket > Used to search and display installation tickets.
- Transact. Overview > Offers a service-spreading, chronologically ordered overview of transactions.
- Admin Tasks > Used to administrate the ISP specific data (for the ISP-Super-User only)

Home Page	

5.1 Info Text

Any information that Swisscom wishes to pass on to the ISP will appear in the “Info Text” box. In the example above the message just says, “Welcome to Swisscoms Web Service Gateway”.

6 Place Order

The Place Order functionality is split into the following distinct parts

- Service Qualification
- Service Availability Qualification
- Basis Creation
- Basis Modification
- Basis Disconnection
- Change ISP
- Service Status
- Handle DDI
- Add Service
- Change Service
- Reduce Service
- Look-up Predecessors

Place Order		
Service Qualification	Service Qualification Test of telephone or address location on BBCS feasibility	Service Availability Qualification Overview and service availability qualification by BB and DN type
Basis Creation	Basis Creation Order a BBCS Access	Add Service Add a service to an existing BBCS
Basis Modification	Basis Modification Change an existing BBCS Access	Change Service Change a service from a BBCS
Basis Disconnection	Basis Disconnection Disconnect a BBCS Access	Reduce Service Remove a service from a BBCS
Change ISP	Change ISP Change ISP of an existing service	Handle DDI Configure BBCS for ISDN PABX with DDI
Service Status	Service Status Test the status of a BBCS	
Look-up Predecessors	Look-up Predecessors Find predecessors by phone number or address with last name or company name	

NOTE: After successfully submitting a request on the Basis Creation, Basis Modification, Basis Disconnection, Change ISP, Add Services, Change Service, Reduce Service or Service Status the Order Detail screen is displayed.

6.1 Service Qualification

Used for explicit 'Service Qualification', shall be used before Order entry, to see, which services are available.
 A Qualification can be done by

- Number
- Address
- Starting Point
- LLID
- Socket
- Binding Id

If the ISP shares the predecessor information and the customer knows the predecessor information. The entry point may be the predecessor look-up.

6.1.1.1 General Input Fields

Name	Optional / Mandatory	Description
Contract Element Base Product	M	A Base Product Contract Element to qualify for
Contract Elements Services	O	Additional Service Contract Elements to qualify for
Fulfillment SLA	O	Fulfillment SLA [Basic Premium Express]; this value has a direct impact to the offered service-speeds, some of them are only offered for "basic" (deprecated Customer-Class "private") and others are only offered von "premium" (deprecated Customer-Class "business")
BB Type	O	Preferred BB Type(s) to qualify for
Fulfillment Wish Date	O	Fulfillment Wish day (the day you wish to have completed a following create order); if specified the qualification result will contain Time Slot information.
Synchronisation with voice	M	Yes (checked) or No. If checked and a pending "TDM voice order" exists, the qualification result will contain the planned completion day of this voice order as the only possible fulfillment day. Be aware that an express order always needs to check if there is a pending TDM voice order.
Has ONP	M	Yes (checked) or No. If checked indicates "Operator Number Portability" (used in conjunction with Business Type "Product Change").
Business Type	M	Business Type (New Relocation Product Change Isp Change Preorder Tech Change). Choose "Product Change" only if you want to change the Base-CE. Note: At the moment only product changes from TAL to BBCS_Standalone or vice versa is supported. Note: At the moment only tech changes from BBCS-F BX to BBCS-F XGS-PON or vice versa are supported. Such Fiber tech changes need to be submitted with OrderType "CREATE" and Business Type "Tech Change". Note: ISP Changes with implicit tech change from BBCS-F BX to BBCS-F XGS-PON or vice versa need to be submitted with OrderType "CREATE" and Business Type "Isp Change".
Appointment Id	O	Identification of an appointment
Appointment Date/Time	O	Date/Time of an appointment
DN Type	O	DN Type to qualify for
Line State	O	State of qualified line (active, inactive, planned, all)

Name	Optional / Mandatory	Description
New Loop	O	Yes (checked) or No. If checked the qualification will be consider to use a new loop.
Ext Ref	O	External Reference
Customer Location Id	O	Customer Location Id
Return Speed at NOK	O	Yes (checked) or No. If checked the qualification show speeds even at copper or space shortage. This option is available for copper qualification by address and by starting point.

6.1.2 Service Qualification by Number

Used for explicit 'Service Qualification', shall be used before Order entry, to see, which services are available for a certain access defined by a phone number (DN, VN, NSN).

Qualification by Number

DN / VN / NSN * (0314445566)

6.1.2.1 Specific Input Fields

Name	Optional / Mandatory	Description
DN/VN/NSN	M	Directory Number, "Verrechnungsnummer" or Net service Number to qualify for

6.1.3 Service Qualification by Address

Used for explicit 'Service Qualification', shall be used before Order entry, to see, which services are available for a certain location.

Qualification By Address

ZIP / City
 Street
 House Nr
 Building
 Last Name
 First Name

6.1.3.1 Specific Input Fields

Name	Optional / Mandatory	Description
Last Name	O	Last Name
First Name	O	First Name
Street	M	Street
House Nr	O	House Nr
Building	O	Building
ZIP	M	ZIP ("Postleitzahl")
City	O	City

6.1.3.2 Address Autofill

Qualification By Address

ZIP / City: 306 | x

Street: 3063 Ittigen

House Nr: 3065 Bolligen

Building: 3066 Stettlen

Last Name: 3067 Boll

First Name: 3068 Utzigen

House Nr: Bernstr.

Building: Berntorgasse

Last Name: Gerberngasse

First Name:

To add a valid address fill in the fields in the order ZIP/City, Street, House Nr or ZIP/City, Street, Building then only known values are presented. The values may be overruled. If the address is missing that should be entered open a clarification ticket by "Ask Address", an "Ask Swisscom" request for "Address Input (Autofill)".

6.1.4 Service Qualification by Starting Point

Qualification by Starting Point

Tax Region *
Access Net *
Unit Type *
Unit Number *
SSE *
Contact Type
Contact Number

6.1.4.1 Specific Input Fields

Name	Optional / Mandatory	Description
Tax Region	M	Swisscom's Tax Region (Geschäftsstelle)
Access Net	M	Swisscom's Access Net (Zentrale)
Unit Type	M	Unit Type
Unit Number	M	Unit Number
SSE	M	Schaltstellenelement
Contact Type	O	Contact Type
Contact Number	O	Contact Number

6.1.5 Service Qualification by Local Loop ID

Used for explicit 'Service Qualification', shall be used before Order entry, to see, which services are available for a certain access defined by a local loop id (LLID).

Qualification by LLID

LLID *

6.1.5.1 Specific Input Fields

Name	Optional / Mandatory	Description
LLID	M	Identification number of the local loop

6.1.6 Service Qualification by Socket

Used for explicit 'Service Qualification', shall be used before Order entry, to see, which services are available for a certain fiber access (OTO = Optical Telecommunication Outlet) identified by a Socket Id or Cooperation Id.

Qualification by Socket

Socket Id Socket Id or Cooperation Id *

Cooperation Id

Plug Nr

6.1.6.1 Specific Input Fields

Name	Optional / Mandatory	Description
Socket Id or Cooperation Id	M	Either enter Socket Id or Cooperation Id Socket Id validation: Type-A: SWISSCOM identification in format A.nnn.nnn.nnn Type-B: BAKOM identification ion the format x.nnn.nnn.nnn.c (c = check digit modulo-11, "0 - 9" or "X")
Plug Nr	O	Plug Nr of the fiber socket

6.1.7 Service Qualification by Binding Id

Used for explicit 'Service Qualification', shall be used before Order entry, to see, which services are available for a certain access defined by a Binding Id.

Qualification By Binding Id

Binding Id *

6.1.7.1 Specific Input Fields

Name	Optional / Mandatory	Description
Binding Id	M	Binding Id to qualify for

6.1.8 Service Qualification by Location Id

Used for explicit 'Service Qualification' by Location Id shall be used before order entry. For PreOrder BBCS-F you generally do not know the location Id and you have to start with Service Availability Qualification By Address for BBCS-F and do the Service Qualification by "Qualify PreOrder" from the SAQ Response page.

Qualification By Location Id

Location Id *

6.1.8.1 Specific Input Fields

Name	Optional / Mandatory	Description
Location Id	M	Location Id to qualify for

6.1.9 Service Qualification Result for Copper

According the given input fields one or more qualification results will be displayed, showing the possibilities of broadband services for the desired line / location.

6.1.9.1 Fields

Name	Description
Request	Fields of the request see above
Responses	
Qualification Nr	The Qualification Number can be used to Service Creation, Service Modification or Change ISP
DN Type	DN Type of the line
DN (STNR) / VN/NSN	Directory Number of the tested line ("Stammnummer")
ADSL, VDSL, SDSL	For all supplied Technologies
BB Device Location	Supplied in BB Device Location.
Qualif Result State	ok or not ok
DN Office /Endpoint info	Supplied in DN Office.
BB Device Location	Supplied in BB Device Location.
Site	Site
Site Category	Site Category
Available Technology Type	Available Technology Types at the DSLAM out of VDSL2, VDSL Vectoring or G.FAST
DSLAM Name	
DSLAM Type	
BB Logical Port	
BB Port Line Type	Like ana = analog., dig = digital (Qualification by Address and Startpoint only)
Vendor	Like Huawei, Nokia (Qualification by Address and Startpoint only)
Line State	active or inactive or planned
LLID	Local Loop identification
LLID Activation Date	planned activation date for an line with "Line State" = planned
LLID Disconnection Date	planned disconnection date if a line will be abandoned
Qualif Result Detail	Qualification result detail code and comment

Plannend Endpoint	Is only available if a new endpoint is planned
DN Office	64BOL
BB Device Location	BOLD
Site	BOLP
Site Category	RUS
Equipped Date/Target Date	2016-02
Equipped Date Quality	
Equipped Date Comment	
Extension Category	
Equipped Date History	
Change Date	Date of the change
Change Reason Description	Description of the change
Change Reason Id	Reason Id of the change
Event From	Event From
Event To	Event To
Event Type	Event Type
Sort Nr	Sort Nr
Starting Point Info	
Tax Region	64
Access Net	BOL
Unit Type	UP
Unit Number	10000
SSE	0
Contact Type	UPK
Contact Number	62
UP preparation	
Site Development	50% = Ration BC/Units, Yes = Is Fully Developed
Nr of Utilisation Units	Number of units
Nr of Basic Connectivities	Number of connected units
Fully Developed	Yes in case of "DBC – Vollerschliessung" (GVE-Flag = true)
Nr of Lines Total	Total number of copper lines at this location
Nr of Lines Usable	Number of copper lines usable for new connections at this location
Address	Address information
Building	Name of building
Street	Name of street
House Nr	Number of House
ZIP	ZIP Code
City	Name of City

CPE info	
CPE Name	Motorola 7347-44 POTS rel.7.9
DSLAM Type Allowed	CPE supports these combination of DSLAM type and Technology (Superset of BB Type)
Capability	
Technology Type	This line defines the capability for this technology type
Capability Overall	
Capability Hardware	
Capability Firmware	
Comment	CPE Comment
Contract Element Info	
Basis Contract Element	BBCS_Standalone
Current Access Speed	The Current Access Speed and its Technology Type
Max. Access Speed	The highest Access Speed Profile possible and its Technology Type
Current DN Type	Multi Line
Average Flag	Yes, if this is the record with the average calculation - No otherwise.
Billing Zone	Billing Zone
Jumper Action	Y or N say if to take a jumper action (Überführungsrelevant)
OSI Recommendation	Onsite Installation Recommendation about broadband "self installation" at end user location
Potential Available	Y if a grooming potential (better access speed) is available
Reason of Potential	1000 - outstanding upgrooming 1002 - old CPE Hardware
Technology Type	Qualified Technology Type for a new order.
PSD Class	Spec_VDSL2_17a f.e. others see LOV Document
Interleave Mode	Interleave Low f.e others see LOV Document
Vectorized	Y if the current access speed technology type is VDSL Vectoring
Port Available	Y port is available
Copper Available	Y if copper is available
WARP Port Available	Y if WARP port is available
Upgrade plan date	If no resource is available for the Contract Element, when an upgrade is planned and resource should be available.
Swisscom Ready	Y indicates that access currently is Basic Connectivity
Service Contract Element	Best Effort, Streaming, Real Time
Service Profile	Service Profile for a certain Technology
Qualification Index	Qualification Index (PK)
Service Profile	Supplied Service Profile
Used Access Speed	Used Access Speed
Effective Speed	Effective Speed (can be lower than the Service Speed if the Access Speed has lower bitrates for up- or download)
BB Number of Wires	Number of Wires

Fulfillment Time Slot	5 next possible Fulfillment Dates for a create order
Fulfillment Time Slot Index	Fulfillment Time Slot Index
Fulfillment Time Date Time Start	Start datetime
Fulfillment Time Date Time End	End datetime

If no services available for this number the failure code from the Swisscom internal Service Qualification will be displayed.

6.1.10.1 Fields

Name	Description
Request	Parameters of the request.
Responses	
Qualification Nr	The Qualification Number can be used to Service Creation, Service Modification or Change ISP
Basis Contract Element	The Basis Contract Element
Location Id	The id of the location
Qualif Result State	State of the qualification
Address	Address of the location
First Name	First Name
Last Name	Last Name
Building	Name of building
Street	Name of street
House Nr	Number of House
ZIP	ZIP Code
City	Name of City
DN Office	Supplied in DN Office.
BB Device Location	Supplied in BB Device Location.
Site Development	61% = Ration BC/Units, Yes = Is Fully Developed, 6/55 = #OTO/OTO Penetration Rate
Nr of Utilisation Units	Number of units
Nr of Basic Connectivities	Number of connected units
Fully Developed	Yes in case of "FBC – Vollerschliessung" (GVE-Flag = true)
Quantity of Build OTO	Number of built OTO
OTO Penetration Rate	#OTO/#units in %
Calculated Plug Nr	plug number calculated in real time based on which OTO plug has the biggest amount of Fiber Access RFS with Right of Use "Swisscom" in a single Served Location.
List of Sockets	One or more sockets
Flat Id	Flat Identification
Socket Id	Socket Id
Cooperation Id	ISP specific socket identification

Plugs	Zero or more plugs
Plug Nr	Plug number
AccessId	AccessId
Access Protocol	Access Protocol: BX
Fiber Line State	State of fiber line state; possible values are CONNCETED or AVAILABLE or PLANNED
OTO State	State at the socket; same values as "Fiber Line State"
Is Active	Is Active
Remark	
Jumper Action	Jumper Action: Y, N or empty (Überführungsrelevanz)
Speeds	Zero ore more service speeds
Qualification Index	Qualification Index
Calculated max Access Speed	Maximum access speed
Current Access Speed	currently installed access speed Profile
Service Profile	Service Speed Profile
Effective Speed	Effective Speed (can be lower than the Service Speed if the Access Speed has lower bitrates for up- or download)
Fulfillment Time Slot	One or five time slots (only returned if "Fulfillment Wish Date" was given in request). Cross Connection Time Slot
Index	Index of the time slot
Start Date/Time	Start Date/Time of the time slot
End Time	End Date/Time of the time slot
Inhouse Connection Appointment Time Slots	Inhouse Connection Time Slot (the selected time slot is booked as an appointment on create)
Id	Identify the time slot
Start Date/Time	Date an start time of time slot (Has to be after cross connect time slot)
End Time	End time of time slot
Duration	Duration in minutes of the time slot
Rank	Rank of the time slot ascending 0 -100. 0-50 -> lime, 51-75 -> yellow, 76-100 -> red

List of Building Entry Points	Zero or more BEP's.
Location Id	Location id of the BEP
Street	Address of the BEP
House Nr	Ditto
ZIP	Ditto
City	Ditto
BEP State	State of the BEP
Availability Date/Target Date	When the BEP is available for provisioning.
Quality Class	Quality Class of the Availability Date/Target Date
Availability Date Reason	Reason comment of the Availability Date/Target Date
In House Allowed	In-house installation allowed
First Inhouse Installation	Is it the first in-house installation
Max Access Speed Kbps	A List of Max Access Speed in kbps
Initial Mounting Shaft Capacity	possible values are: "available", "not available", "not checked"
Site Category	possible values are: "standard", "remote_fan_fibre_spot"
BEP Builder	possible values are: "SCS", "KOPA"
BEP Event	
Event Type	Type of the event with Id and Description
Event Time Stamp	Timestamp of the event
Event Reason	Reason comment of the event
From	Start of the range
To	End of the range
Sequence Number	Sequence number of the event

6.2 Service Availability Qualification

The Service Availability Qualification gives an overview of available services in a quadrant of BB type and DN type. The SAQ can either by Qualification by Number, Address, Starting Point, LLID, Socket or Binding Id.

6.2.1 Input Fields

Name	Optional / Mandatory	Description
Contract Element (Base Product)	M	A Base Product Contract Element to qualify for
BB Type	O	Preferred BB Type to qualify for
DN Type	O	DN Type to qualify for
Line State	O	
New Loop	O	
Return Speed at NOK	O	Yes (checked) or No. If checked the qualification show speeds even at copper or space shortage. This option is available for copper qualification by address and by starting point.
DN/VN/NSN	O/M	Directory Number to qualify for
Last name	O	Last name of the ancestor
First name	O	First name of the ancestor
Street	O	Street
House Nr	O	House Nr
ZIP	O/M	ZIP ("Postleitzahl") for Autofill see 6.1.3.2
City	O	City
Building	O	Building
Tax Region	O/M	Tax Region

Name	Optional / Mandatory	Description
Access Net	O/M	Access Net
Unit Type	O/M	Unit Type
Unit Number	O/M	Unit Number
SSE	O/M	SSE (Schaltstellenelement Nummer)
Contact Type	O	Contact Type
Contact Number	O	Contact Number
LLID	O/M	Local Loop ID
Socket Id	O/M	Socket Id Socket Id validation: Type-A: SWISSCOM identification in format A.nnn.nnn.nnn Type-B: BAKOM identification ion the format x.nnn.nnn.nnn.c (c = check digit modulo-11, "0 - 9" or "X")
Cooperation Id	O/M	Cooperation ID
Plug Nr	O	Plug Nr on the fiber socket
Binding Id	O/M	Binding Id to qualify for
Location Id	O/M	Location Id to qualify for

O/M - Mandatory depending on Qualification by Number, Address, LLID, Socket or Binding Id.

6.2.4.2.1 Output Fields

Name	Description
Request	Parameters of the request.
Responses	BB Type x DN Type
Location Id	The id of the location
Qualif Result State	State of the qualification
Address	Address of the location
Building	Name of building
Street	Name of street
House Nr	Number of House
ZIP	ZIP Code
City	Name of City

Name	Description
Site Development	61% = Ration BC/Units, Yes = Is Fully Developed
Nr of Utilisation Units	Number of units
Nr of Basic Connectivities	Number of connected units
Fully Developed	Yes in case of "FBC – Vollerschliessung" (GVE-Flag = true)
Quantity of Build OTO	Number of built OTO
OTO Penetration Rate	#OTO/#units in %
Calculated Plug Nr	plug number calculated in real time based on which OTO plug has the biggest amount of Fiber Access RFS with Right of Use "Swisscom" in a single Served Location. E.g., if we have 10 oto with 8 SCS Fiber RFS on plug 2, and 2 SCS Fiber RFS on plug 1, the SCS Plug Number will be = 2
List of Sockets	One or more sockets
Flat Id	Flat Identification
Socket Id	Socket Id
Cooperation Id	ISP specific socket identification
Fiber Line State	State of fiber line (this and below attributes are present but on sockets without plugs)
OTO State	State at the socket
Availability Date	When the socket is available for provisioning.
Plugs	Zero or more plugs
Plug Nr	Plug number
Fiber Line State	State of fiber line state (this and below attributes are present but on sockets without plugs)
OTO State	State at the plug
Speeds	Zero ore more service speeds
Calculated max Access Speed	Maximum access speed
Current Access Speed	currently installed access speed Profile
Service Profile	Service Speed Profile
Effective Speed	Effective Speed (can be lower than the Service Speed if the Access Speed has lower bitrates for up- or download)
List of Building Entry Points	Zero or more BEP's.
Capacity Availability on BEP	Yes -> one of the BEP's has free capacity
Location Id	Location id of the BEP
Street	Address of the BEP
House Nr	Ditto
ZIP	Ditto
City	Ditto
BEP State	State of the BEP

Name	Description
Availability Date	When the BEP is available for provisioning.
Availability Date Reason	Reason comment of the Availability Date/Target Date
In House Allowed	In-house installation allowed
First Inhouse Installation	Is it the first in-house installation
Max Access Speed Kbps	A List of Max Access Speed in kbps
Initial Mounting Shaft Capacity	possible values are: "available", "not available", "not checked"
Site Category	possible values are: "standard", "remote_fan_fibre_spot"
BEP Builder	possible values are: "SCS", "KOPA"
BEP Event	
Event Type	Type of the event with Id and Description
Event Time Stamp	Timestamp of the event
Event Reason	Reason comment of the event
From	Start of the range
To	End of the range
Sequence Number	Sequence number of the event
Available Technology	
BB Type	Possible values are: "BX", "XGS-PON"
Planned Date	When the technology (BB Type) is available for provisioning.

6.3 Look-up Predecessors

Find a formerly used line at the same location that can be reused. The request is only fulfilled if the ISP is allowed to access this operation, participate on collect, and share current customer information for predecessor information as part of the order process (see f. e. operation as create, modify and ISP change).

6.3.1 Look-up by Phone Number

Find predecessor entries with DN/VN/NSN of the broadband connection or phone number (voice over broadband number) from the predecessor data.

6.3.1.1 Specific Input Fields

Name	Optional / Mandatory	Description
Phone	M	The phone number (DN/VN/NSN of the broadband connection or the voice over broadband phone number)

6.3.2 Look-up by Address

Find predecessor entries at a given location

6.4 Basis Creation

This function is used to create new BBCS Services on existing active voice lines identified by a directory number (DN) or Verrechnungsnummer (VN) in the case of a business line. Hereafter we will just use the term “directory number”.

In case of SDSL the service is not created on active voice line but a Starting Point and Speed Profile. To find the Starting Point and a Speed Profile a qualification by an address location has to be done. For Service Creation a Qualification Number and Index reference the selected pair of Starting Point and Speed Profile. Later in the order process when the line is activated a Net Service Number (NSN) will be assigned.

6.4.1 First screen

Drill down the first screen of Service Creation (in 3 Steps).

6.4.1.1 Fields

The user has to fill out following attributes to create a new BBCS Service:

Name	Optional / Mandatory	Description
Customer Wish Date	M	Date on which the order will be entered. Default is current date. Form the qualification this is the Date of Fulfillment Timeslot (Schaltzeitfenster)
Contract Element	M	The Contract Element (LOV) If Suppress SLA Check is unchecked only the contracted Elements are shown.
BB Type	O	BB service type (LOV).
Session Type	M	Session Type (LOV)
DN / VN / NSN	M	Directory number to create the new service N.B. If the BB Type is SDSL mustn't given but a Qualification has to be done in advance or is initiated before the second Service Creation screen.

MAC Address	O	This element only exists, if the Order is XGS PON or Creation Typ = Preorder
Fulfillment SLA	M	Fulfillment SLA (LOV)
Assurance SLA	M	Assurance SLA (LOV)
Kind of Creation (LOV)	M	“New”: new BBCS Service Creations. “Promotion”: the creation will be done manually “Synchronisation with voice”: to start a chain of events and checks to synchronise the ADSL connection with its voice counterpart. “Preorder”: identifies a Basis Create and a Add Services as a preorder “ISP Change”: if qualification is done with ISP Change, then use this creation type
Qualification Nr	M	Number of Qualification by Number
Fulfillment Time Slot Index	M	For fiber the fulfillment time slot is cross connection time slot
Inhouse Connection Time Slot Id	O	Is required if the fiber inhouse connection is not the first in building
Customer Order Nr.	O	Number of Customer
Order Group Nr	O	Number of Order Group
WOS ID	O	Work Order Synchronisation Identification: used to synchronize voice (TDM) order with broadband orders

Changes

Rel.	CR	Description
18.01	SO-4421	New attribute Move To Save Address
17.10	SO 4128	Earliest Start Date

6.4.2.4 Fields

The user has to fill out following attributes to create a new BBCS Service:

Name	Optional / Mandatory	Description
External Reference	O	Free text comment for extra ISP reference information
Process With Low Priority	O	Check to reduce the speed of the order processing
Comment	O	Free comment or can be used for DSLAM Type Restriction +R_ADSL++ means that a ASAM Port should be reserved +R_VDSL++ means that a ISAM Port should be reserved +M_EMU++ means that an emulated (ADSL) Port should be reserved
Pool Type	O	Pool Type applicable only for session type DHCP
CPE Owner	M	Who owns the equipment (LOV).
Delivery Notification	O	If checked a Delivery Notification is sent to the Special order notification e-mail (See:12.1.1.1 ISP Order Service Settings). N.B. The field is invisible if the calculation of the notification returns a date in the past.
Current Customer (for predecessor info)		May be configured to be mandatory (last name or company name are mandatory). Is only available for copper.
Last Name	O/M	Identify private person the last name and first name
First Name	O	
Company Name	O/M	Identify private companies with the company name
Phone	O	The VOBB phone number
Visibility	O	LVG Visibility Flag
Onsite Support		
Onsite Support (only if SLA allows Onsite Support)	M	Type of Onsite Support (LOV). If not "None" an Installation Ticket is open at the same time with Order.
End-user name (only if SLA allows Onsite Support)	O	Name of the end user.
End-user phone (only if SLA allows Onsite Support)	M	Phone to call back the end user.
End-user comment (only if SLA allows Onsite Support)	O	Comment concerning the end user and Onsite Support
Hardware Delivery State (only if SLA allows Onsite Support)	M	The Hardware Delivery State (LOV): unknown, pending, delivered.
Hardware Delivery Date (only if SLA allows Onsite Support)	O	The date when the ISP delivers the hardware.
Hold (only if SLA allows Onsite Support)	M	If checked the Installation Ticket is kept in Entered-State until the Hardware Delivery Date is reached.
Appointment Id (only if SLA allows Onsite Support)	O	Identification of a previously booked appointment
Installation from (only if SLA allows Onsite Support)	O	Installation from - to define an Installation time frame.
Installation to (only if SLA allows Onsite Support)	O	Location of Hardware delivery
Hardware Delivery Location to (only if SLA allows Onsite Support)	O	
Hardware Type (only if SLA allows Onsite Support)	O	Type of Hardware
Hardware External Reference (only if SLA allows Onsite Support)	O	Reference (SAP Order number)
Installation Type (only if SLA allows Onsite Support)	O	Installation type
Additional Installation (only if SLA allows Onsite Support)	O	Additional Installation

6.5 Create Preorder

On a location with basic connection always on, typically a fully developed site, you can create a preorder to get the Preorder Activation id. After entering the order, it gets on hold and waits on its activation. When the end user plugs in his CPE and enters Preorder Activation id the order completes and the connection is established.

6.5.1 First screen

Create preorder does a Basis Create with Creation Type "Preorder".

back submit reset

6.7.1.1 Fields

The user has to fill out following attributes to disconnect an active BBCS service:

Name	Optional / Mandatory	Description
DN / VN / NSN	M	Active directory number (root number).
Customer Wish Date	M	Date on which the order will be entered. Default is current date.
Kind of Creation (LOV)	M	“New”: new BBCS Service Creations. “Synchronisation with voice”: to start a chain of events and checks to synchronise the ADSL connection with its voice counterpart.
External Reference	O	Free text comment for extra ISP reference information
Comment	O	Free comment.
Delivery Notification	O	If checked a Delivery Notification is sent to the Special order notification e-mail. (See:12.1.1.1 ISP Order Service Settings). N.B. The field is invisible if the calculation of the notification returns a date in the past.
Customer Order Nr.	O	Number of Customer
Order Group Nr	O	Number of Order Group
WOS Id	O	Identification of the Work Order Synchronisation Id (to synchronize a TDM-Voice order and a BBCS order)

6.8 Service Status

Used to show the status of an active BBCS service of a customer belonging to a certain ISP and identified by a directory number.

Service Status

ISP 777710 Testaccount WSG Team

by DN / VN / NSN

DN / VN / NSN* (0314445566)

by Socket

Socket Id
Cooperation Id
Plug Nr

Socket Id or Cooperation Id *

6.8.1.1 Input Fields

The user has to fill out following attributes to show BBCS service status:

Name	Optional / Mandatory	Description
By DN/NV/NSN		
DN / VN / NSN	M	Active directory number (root number)
By Socket		
Socket Id	O/M	Socket Id is also known as OTO Id. Socket Id or Cooperation Id is mandatory by Socket
Cooperation Id	O/M	Cooperation Id is also known as Partner Label.
Plug Nr	M	1..4

6.8.2 Handle DDI – Get Business Line Identity

6.8.3 Handle DDI

This form is used to invoke a “Get Business Line Identity” message for a given Stammnummer belonging to an ISDN PABX with DDI. The results are displayed in the subsequent PABX Summary screen. This process is started by clicking on the “Get Business Line Identity” link. Alternatively the user may invoke the Service Qualification function by filling in the Verrechnungsnummer (VN) field and clicking the submit button.

Handle DDI Service Qualification

ISP 777710 Testaccount Peter Rosenberger

BBCS STNR/DDI (0314445566) [Get Business Line Identity](#)

BBCS VN (0311444556)

6.8.3.1 Fields

The user has to select and fill out one of the following fields:

Name	Optional / Mandatory	Description
BBCS STNR/DDI	O	The ISDN PABX (with DDI) Stammnummer or DDI number
BBCS VN	O	The Verrechnungsnummer associated with the ISDN PABX

6.8.3.2 Form Validation

If the “Get Business Line Identity” link is clicked without or with an invalid Stammnummer being defined then an error will be displayed:

Get Business Line Identity

Invalid Input

Message STNR_DDI is missing

Field BBCS STNR/DDI

6.8.4 PABX Summary

Immediately after clicking the “Get Business Line Identity” link the PABX summary form will be displayed. If there are “recent” results in the database for the requested Stammnummer or DDI then these results will be displayed immediately. If no such results exist then a “Get Business Line Identity” message will be dispatched to the Swisscom back-end system, no results will be displayed on the form and the function buttons will also be disabled. The screen refreshes itself approximately every minute but the user may also use the refresh button. It may take several minutes before “fresh” results are available:

6.8.4.1 PABX Summary – with no “recent” results

A screen similar to the following will be displayed:

PABX Summary

Comment	O	Free comment.
Delivery Notification	O	If checked a Delivery Notification is sent to the Special order notification e-mail. N.B. The field is invisible if the calculation of the notification returns a date in the past.
Onsite Support (only if SLA allows Onsite Support)	M	Type of Onsite Support (LOV). If not "None" an Installation Ticket is open at the same time with Order.
End-user name (only if SLA allows Onsite Support)	O	Name of the end user.
End-user phone (only if SLA allows Onsite Support)	M	Phone to call back the end user.
End-user comment (only if SLA allows Onsite Support)	O	Comment concerning the end user and Onsite Support
Hardware Delivery State (only if SLA allows Onsite Support)	M	The Hardware Delivery State (LOV): unknown, pending, delivered.
Hardware Delivery Date (only if SLA allows Onsite Support)	O	The date when the ISP delivers the hardware.
Hold (only if SLA allows Onsite Support)	M	If checked the Installation Ticket is kept in Entered-State until the Hardware Delivery Date is reached.
Appointment Id (only if SLA allows Onsite Support)	O	Identification of a previously booked appointment
Installation from (only if SLA allows Onsite Support)	O	
Installation to (only if SLA allows Onsite Support)	O	
Hardware Delivery Location to (only if SLA allows Onsite Support)	O	Location of Hardware delivery

Name	Optional / Mandatory	Description
Hardware Type (only if SLA allows Onsite Support)	O	Type of Hardware
Hardware External Reference (only if SLA allows Onsite Support)	O	Reference (SAP Order number)
Installation Type (only if SLA allows Onsite Support)	O	Installation type
Additional Installation (only if SLA allows Onsite Support)	O	Additional Installation

Process With Low Priority ☐

Name	Optional / Mandatory	Description
DN / VN / NSN	M	Directory number to create the new service
External Reference	O	Free text comment for extra ISP reference information
Comment	O	Free comment.
Kind of Creation (LOV)	M	"New": new BBCS Service Creations. "Promotion": the creation will be done manually "Synchronisation with voice": to start a chain of events and checks to synchronise the ADSL connection with its voice counterpart.
Process With Low Priority	O	Check to reduce the speed of the order processing

6.13 Compound

Service Creation, Service Modification or Change ISP can be ordered with services like Streaming or Real Time together in a so called compound. To do this on the second screen enter "add service" instead of submit. A "Select Service" screen allows selecting the wanted services.

Example compound for "Service Creation":

6.13.1 Select services

Select one or more services to add.

Select Services (SRV_ADD)

Order Type	Contract Element	BB Type	Speed Profile
BBCS_CREATE	BBCS_on_TDM	VDSL

See screen of Add Service (chapter 6.10.3)

6.13.3 Fields

See fields of Add Service (chapter 6.10.1.1)

7 Maintain Order

This section addresses the order management. The flow chart depicted below illustrates the various navigation possibilities between the screens associated with the order management.

7.1 Read Orders

The 'Read Orders' screen will be used to handle the WSG work orders. You can select the orders with any combination of the input fields. To get a good performance the user should type in all information that he knows, so it will get a good overview of the orders summary screen.

NOTE: If the sort orders on the right are changed then these changes will stay in force for the session life of the browser!

- Advanced: Search orders with more and user selectable attributes for the search criteria (see 7.2).
- Advanced History: Search history orders with more and user selectable attributes for the search criteria (see 7.2).
- Wildcard search is supported for the following attributes
 - Customer Order Nr
 - Order Group Nr
 - WOS ID
 - Order Nr
 - DN / VN / NSN
 - DN / VN / NSN (Requested)
 - DN Office
 - BB Device Location
 - External Reference

7.1.3.1 Fields

The user can fill out following attributes on page 1 to select the orders:

Name	Description
Customer Order Nr	one "Customer Order Nr" or a range "from – to"
Order Group Nr	one "Order Group Nr" or a range "from – to"
WOS ID	Identification of a "Work Order Synchronisation Id"
Order Nr	one "Order Nr" or a range "from – to"
Order Type	one or more "Order Types"
Order State	one or more "Order States"
DN / VN / NSN	one "telephone number" or a range "from – to"
DN / VN / NSN (requested)	one requested "telephone number" or a range "from – to" (the requested number is the number used when the order was initiated, the attribute "DN/VN/NSN" is usually the same but can be another number if the requested number was MSN and not the base number)
Customer Wish Date	one "CWD" or a range "from – to"
Due Date	one "Due Date" (completion date) or a range "from – to"
Estimated Due Date	one "Estimated Due Date" or a range "from – to"
Transaction Date/Time	one "Transaction Date/Time" or a range "from – to"
Search Category	Preselect Active, Archived or Get Service Status Group to achieve a better performance. Has to be used with other search criteria's.
Contract Element	one or more "Contract Element" (BBCS product)
BB Type	one or more BBCS "BB Type" (technology)
Service Profile	one or more "Service Profile" (usually Best Effort Speed)
Service Speed (Requested)	one or more "Service Profile (requested)"; (since about 2007 there is no difference anymore between the "requested" and the "actual" Best Effort service speed)

The user can fill out following attributes on page 2 to select the orders:

Name	Description
New ISP (Receiver)	new ISP in case of "CHANGE_ISP" orders
CPE Owner	one or more "CPE Owner" (Customer Premises Equipment)
Kind of Creation	one or more "Kind of Creation"
DN Type	one or more "DN Types"
DN Office	specific "Central Office" (Zentrale des TDM-Anschlusses)
BB Device Location	specific "BB Device Location" (DSLAM / ISAM Standort)
Region	one or more "Regions"
OP Status	one or more "Open-Pipe Stati"
External Reference	specific ISP entered reference text of the order
Internal Reference	one or more "Internal Reference"
Assurance SLA	one or more "Assurance SLA"
Fulfillment SLA	one or more "Fulfillment SLA"
Onsite Support	one or more "Onsite Installation" products

The user can fill out following attributes on page 3 to select the orders:

Name	Description
Self Install	specific "Self Install" information
Delivery Notification	specific "Delivery Notification"
Message Type	a comma separated list of associated TDM messages
Appointment Id	a specific "Appointment Identification"
Appointment Date/Time	one "Appointment Date/Time" or a range "from – to"
Vectorized	Y, N or both
DSLAM Name	Name of the connected DSLAM
Preorder Activation Code	A 6-digit code used to activate or release a preorder

At the end of the screen the following attributes are controlling the kind of the search and the presentation of the search result.

Name	Description
History	Show the full history of the order numbers
Count Only	If checked, the query will be redirected to a search result count screen rather than to a summary screen directly. This feature enables the user to check the number of potential result records matching the selection criteria prior to view the summary, which can be very time consuming or even impossible (due to restrictions defined with system parameters) in case of vast amounts of resulting records.

The user can use following to sort criterion:

Name	Description
Sort Number	The Order, according to which the attributes are sorted.
Sort Order (LOV)	"Ascending" "Descending"

7.2 Advanced Read Order / Advanced History Read Order

Select the fields from the available ones that should be part of the search criteria. Add an available field to selected fields by selecting the fields in the available fields and pull the Add button. Remove a selected field by selecting it in the selected and pull Remove button. The set of selected fields is stored in the session, so if you do multiple searches, the preselected fields are these of your last advanced search.

7.3.1 Download and Download (no history)

The order summary can be downloaded by pressing either the 'download' or the 'download (no history)' button. The fields displayed in the downloaded report appear in the same order as the 'Detail Order' screen (see below.) The 'download (no history)' shows only the raw information without the transaction history. It is normally therefore, much shorter and much more readable!

7.4 Detail Order

After selecting a work order with the "[Detail](#)" field, the 'Detail Order' will be displayed. Only valid buttons for the next possible steps are active.

7.4.1 Main Tab

This tab contains the main order attributes. There is a small difference between the "access orders" (CREATE, MODIFY, ISP_CHANGE, DISCONNECT) containing a block "Layer 1 / Basis" and "service orders" (SRV_ADD, SRV_CHANGE, SRV_REDUCE) containing a block "Layer 3 (SPT) / Service".

7.4.7 Buttons

The following buttons are shown at the end of each "Detail Order" screen. Exception is the "Detail Order" screen from a Disconnect Order. (see page 91)

Voice Messages	Transaction Overview	Installation Ticket	Qualification History	Ask Swisscom
back	modification	reschedule	cancel	refresh

Buttons only Disconnect Order:

7.4.7.1 Button “Voice Messages”

This button leads you to the “Voice Message Summary” dialog and shows you all voice messages affecting the DN/VN/NSN of the actual order; see chapter 8 Voice Messages for more details.

7.4.7.2 Button “Transaction Overview”

This button leads you to the “Transaction Overview” dialog and shows you all transactions (work order, voice messages, installation and trouble tickets) affecting the DN/VN/NSN of the actual order; see chapter 11 Transaction Overview for more details.

7.4.7.3 Button “Installation Ticket”

This button leads you to the “Installation Ticket Summary” dialog and shows you all installation tickets for the DN/VN/NSN of the actual order; see chapter 9 Installation Ticket for more details.

7.4.7.4 Button “modification”

This button leads you to the “Modification Pending Order” dialog; see chapter 7.5

7.4.7.5 Button “reschedule”

This button leads you to the “Modification Pending Order” dialog; see chapter 7.5.3

7.4.7.6 Button “cancel”

This button leads you to the “Cancel Pending Order” dialog; see chapter 7.7 for more details.

7.4.7.7 Button “Qualification History”

The “Qualification History Summary” shows all qualifications executed explicitly by the user or implicitly by WSG itself.

7.4.7.8 Button “Ask Swisscom”

“Ask Swisscom” allows the ISP to add a clarification ticket. “Ask Address”

7.4.7.8.1 Add Problem Description and Notes

7.4.7.8.1.1 Fields

The user has to fill out following attributes to add a problem description and notes:

Name	Optional / Mandatory	Description
Problem Description	M	The Problem Description
Problem Notes	O	Notes up to 32 Kbytes
External Reference	O	Give your reference here

7.4.7.8.2 Preview for Submit

You can control the content that will be sent to Swisscom First-Level-Support.

Ask Swisscom

Preview for Submit

ISP	777710 Testaccount WSG Team
BBCS-Order	77771020180122000016000000
Contr Element	BBCS_Standalone
Order Type	BBCS_CREATE
Order State	HOLDING
Problem description	Why this order is on HOLDING
Problem Notes	-
External Reference	

When pressing "submit" your inquiry will automatically be sent to Swisscom First-Level-Support

7.4.7.8.3 Clarification Ticket Created

Ask Swisscom creates a Clarification Ticket with the Ticket Id below. Clarification Tickets can be maintained in WSG Information Service by B2B and GUI. Mail and Web-Service Notification are configurable there too.

Ask Swisscom

Clarificaiton Ticket Created

ISP	777710 Testaccount WSG Team
BBCS-Order	77771020180122000016000000

7.5.2.1 Fields

The user has to fill out following attributes to modify a pending BBCS order:

Name	Optional / Mandatory	Description
Speed Profile (Requested), BB Type	M	Supplied BB service speeds and BB-Type
CPE Owner	M	Who owns the equipment (LOV).
Process With Low Priority	O	Check to reduce the speed of the order processing
External Reference	O	Free text comment for extra ISP reference information
Comment	O	Free comment.
Appointment Id	O	Identification of an appointment
Delivery Notification	O	If checked a Delivery Notification is sent to the Special order notification e-mail (See:12.1.1.1 ISP Order Service Settings). N.B. The field is invisible if the calculation of the notification returns a date in the past.
Onsite Support (only if SLA allows Onsite Support)	M	Type of Onsite Support (LOV).
End-user name (only if SLA allows Onsite Support)	O	Name of the end user.
End-user phone (only if SLA allows Onsite Support)	M	Phone to call back the end user.
End-user comment (only if SLA allows Onsite Support)	O	Comment concerning the end user and Onsite Support
Hardware Delivery State (only if SLA allows Onsite Support)	M	The Hardware Delivery State (LOV): unknown, pending, delivered.
Hardware Delivery Date (only if SLA allows Onsite Support)	O	The date when the ISP delivers the hardware.
Hold (only if SLA allows Onsite Support)	M	If checked the Installation Ticket is kept in Entered-State until the Hardware Delivery Date is reached.
Appointment Id (only if SLA allows Onsite Support)	O	Identification of a previously booked appointment
Installation from / to (only if SLA allows Onsite Support)	O	Installation from - to define an Installation time frame.
Hardware Delivery Location		Location of Hardware Delivery
Hardware Type	O	Type of Hardware

Name	Optional / Mandatory	Description
Hardware External Reference	O	Reference (SAP order number)
Installation Type	O	Installation type
Additional Installation	O	Addition Installation

7.5.3 Late Modify Pending

Allow to change the customer wish date in the late states ACCEPTED and EXECUTED, optionally verified by a qualification. For first way ISLK orders the fulfillment level may be raised or reduced late.

7.7.1.1 Allowed states

To cancel a pending order it must be in one of the following states:

States
ENTERED
HOLDING
PRE_REJECTED
CHECKED
ACCEPTED
REJECTED
DELAYED
PLANNED

After every forward step in the Swisscom back-end system it will no longer be possible to cancel the order!

7.7.1.2 Fields

The user has to fill out following attributes to cancel a pending BBCS order:

Name	Optional / Mandatory	Description
Comment	O	Free comment.

8 Voice Messages

This section addresses the voice message management. The flow chart depicted below illustrates the various navigation possibilities between the screens associated with the voice message management.

8.1 Read Voice Messages

The 'Read Voice Messages' screen will be used to handle the Voice Message. You can select the messages with any combination of the input fields. To get a good performance the user should type in all information that he knows, so it will get a good overview of the Voice Message summary screen.

NOTE: If the sort orders on the right are changed then these changes will stay in force for the session life of the browser!

8.1.1 Form Explanations

8.1.1.1 "show moving"

If clicked then voice messages of type 03, 04 and 15, i.e. all messages pertaining to a move will be grouped by “Customer Business Nr.”

8.1.1.2 “grouped”

If clicked then the voice messages will be grouped by “Customer Business Nr.”, i.e. all messages that belong to one “business” will be grouped together.

8.1.1.3 “Count Only”

If checked, the query will be redirected to a search result count screen rather than to a summary screen directly. This feature enables the user to check the number of potential result records matching the selection criteria prior to view the summary, which can be very time consuming or even impossible (due to restrictions defined with system parameters) in case of vast amounts of resulting records. See a sample search result count screen below:

Voice Message Groups Count

Number of entries = 3

Record a Change Ticket either with a DN / NSN or DSLAM Name and DSLAM Port.

Field Name	Optional / Mandatory	Description
ISP	M	An ISP for whom the change ticket was entered (field not available for ISP users).
External Reference	O	Free text comment for extra ISP reference information
DN / NSN	M / O	Active directory number (root number). Mandatory if no DSLAM Name and Port is given
DSLAM Name	M / O	DSLAM Name. Mandatory if no DN is given. If a DSLAM Name is entered DSLAM Port is mandatory too.
DSLAM Port	M / O	DSLAM Port. Mandatory if no DN is given. If a DSLAM Port is entered DSLAM Name is mandatory too.
Exchange Type	M	Kind of what has to be replaced
Exchange Date	M	
Reminder Process	M	
Greeting Code	M	Greeting Code
Last Name	M	
First Name	O	First Name
Street	O	Street
House Nr	O	House Nr
Building	O	Building

ZIP	O	ZIP for Autofill see 6.1.3.2
City	O	City
E-Mail	O	Email
Mobile Phone	O	Mobile Phone Number
Communication Channel	M	How to communicate with the customer
Language	M	Language (de, en, fr etc.)

Reminder Process indicates if only Customer Contact 1 or also Customer Contact 2 must be entered. Each Customer Contact has mandatory fields. Greeting Code, Last Name, Communication Channel and language are mandatory. There are two new buttons in each contact part. Copy copies the values from one part to the other and Clear removes all values from its part.

After providing the change ticket entry form with valid data and clicking the [submit] button the Change Ticket Detail screen will be displayed. Please consult chapter 10.3 for more information about the Change Ticket Detail screen.

10.2 Maintain Change Ticket

The change tickets may be looked up in the WSG database through the Select Change Ticket screen, which is accessible by clicking the [Maintain Change Ticket] button in the Change Ticket management area.

Field	Description
Last Modified	The timestamp of the last modification followed by the name of the author.
Transaction Type	The transaction type followed by the subtype in parenthesis if available. The following combinations of transaction type and subtype are possible: - WORK_ORDER - BBCS_CREATE - BBCS_MODIFY - BBCS_DISCONNECT - BBCS_GETSTATUS - VOICE_GETSTATUS - ISP_CHANGE - GET_BUSINESS_LINES - ISP_CHANGE DONOR - GET_DSLAM_PORT_STATUS - WORK_TICKET - INSTALLATION - VOICE_MESSAGE - Some numeric value

	ACCESS_TICKET
Business Type	Business Type (New Relocation Product Change Isp Change Preorder Tech Change).
State	The current transaction state (value range depends on transaction type).
ISP (Donor)	The ISP involved with the transaction. Special case: In case of an ISP_CHANGE transaction the donor ISP will appear in parenthesis.
DN/VN (Req/Old)	The DN/VN involved with the transaction. Special case 1: If the requested DN/VN differs from the actual DN/VN it will be displayed in parenthesis. Special case 2: The old DN/VN appears in parenthesis in case of a VOICE_MESSAGE transaction if the old DN/VN differs from the new DN/VN.
External Reference	Free text comment for extra ISP reference information
Response	The current transaction response.

NOTE: The transaction overview can be accessed directly by clicking the [Transaction Overview] buttons in the "Order Detail" and the "Voice Message (Group) Detail" screens.

12 Admin Tasks

12.1 Admin Tasks for ISP Superuser

The Admin Tasks consists of just one function

- ISP Service Settings

12.1.1 ISP Service Settings

The ISP Superuser has a very limited ability. The sole functionality under this topic is to define two Email addresses for notifications of state changes and the arrival of voice responses. After selecting the 'ISP Settings' on the admin screen the 'ISP Order Service Settings' screen will be displayed, on which the Superuser can modify his data.

12.1.1.1.1 ISP Order Service Settings

The Super User can enable/disable various notifications for the ISP which will be sent by Email or can be retrieved by a WebService interface. Each time a status change occurs and the box is selected for the new state, a mail will be sent to the ISP's "State Change Mail" address or a notification message will be generated in a message queue. For voice messages will be the "Voice Message Mail" address used.

Attention: be carefully in using this mail notification functionality. It can be, that a lot of mails will be created, and the E-Mail server of Swisscom or of the ISP could become overloaded!
